https://www.dash.org/wallets/#wallets
Cryptocurrency wallets from Dash have a critical 'malware' file detected only with BitDefender. This is a false positive. I have made exclusions for the detection but still BitDefender cleverly manages to block it one way or another every time.
Please run a scan on this image file:
https://github.com/dashpay/dash/releases/download/v0.12.3.3/dashcore-0.12.3.3-osx-unsigned.dmg
I am not the only one continuing to have the same problem, and only with BitDefender it seems. I reinstall the wallet again every time the file is detected and deleted, rendering the program useless. Please test this program for unwarranted red flags and contact the developers at Dash if necessary for technical assistance.

Thank you,

Hello,

Kindly be informed that we have sent the log to our Virus Lab for analysis purposes and we will contact you with more information once this process has been successfully completed.

Thank you for your patience.
Have a nice day!

Thank you for contacting us.

Please accept our apologies for the delayed answer.

We have analyzed the files and we will remove the detection in the next couple of updates.

Should you require further assistance, please do not hesitate to contact us.

Have a nice day!

Hi Bitdefender Team,

This issue appeared to be resolved.. although as of today I am having the same problem with a false positive as I was experiencing 3 weeks ago which was previously reported.

My antivirus is auto-updated regularly and it seemed to have only come back today with a recent update.

● **Threat successfully deleted**   Today at 11:02 PM ︿

Feature: Antivirus

An infected file attempted to run on your device.
Threat name: Adware.MAC.Generic.11683
Path: /Volumes/Dash-Core/Dash-Qt.app/Contents/MacOS/Dash-Qt
We deleted the file to prevent malicious commands from being executed on your device.

Threat name: Adware.MAC.Generic.11683

Path: /Volumes/Dash-Core/Dash-Qt.app/Contents/MacOS/Dash-Qt

Thank you for your patience.

Upon further analysis, we've come to the conclusion that the first file was indeed a Potentially unwanted application because it is a wallet that contains a miner. So both files will be detected in future updates.

We are sorry for the first misunderstanding.

Should you require further assistance, please do not hesitate to contact us.

Have a nice day!

Best regards,
Roxana Grecu
Technical Support Engineer
