

DASH Quality Assurance

I believe that DASH needs independent individuals that test the products produced by the various projects which are being funded by the DAO.

Depending directly on the decision of the MNO instead of being part of an already established team, allows the individual to directly work in the interests of the user.

Testing is the most annoying but also most important task of product development.

It is also very unpopular to be the tester as the messenger often gets shot instead of appreciated. I don't care about that, I can do that job. As a developer & entrepreneur I have been developing and testing software & business processes for 12 years so far.

I am currently located in Venezuela, I am free to travel and I can visit all the teams working in Venezuela. I speak English and Spanish, so I can communicate directly with all the teams, also in Discord.

I am a partial Masternode Owner and I the success of DASH directly influences the value of my assets. That makes me highly motivated to deliver a good job. (I can also prove the existence of my DASH assets on demand to any other MNO)

Price

For me to be motivated to do that job I have to earn enough that it really makes me want to do that job, that means it must be covering my travel expenses and the cost of opportunity.

Luckily the cost of living in Venezuela is very low, that allows me to offer this work for a very competitive price. Cost of opportunity is much higher for me as a freelance software developer & entrepreneur with 12 years of experience.

I like to calculate my salary in DASH, as that makes me directly interested to deliver a good job, as that will raise the value of these DASH long term.

20 DASH per month (all expenses included) is a salary that would motivate me to work 96 hours per month, travelling, testing, observing, filing feedback issues, recording, cutting, releasing videos & written reports.

At the current price of DASH this is a small salary as I have to cover all the costs for accomodation, mobile internet, travel expenses & test purchases at many merchants.

But I expect the price of DASH to go up again and I will stick to that price, so I am giving a discount at the moment, expecting to make up for that later.

Tasks (Dash Mall, Dash Retail, Dash Help, Discover Dash, Dash Text, Dash Core Group, Dash Partner)

In January I would like to visit the city of Merida for four days, so that I would have a full day at each of the **Dash Mall** Shopping Centers to visit every single merchant and interview them about their experience with DASH. I have profound experience with merchants, as I have personally onboarded 100+ merchants in 7 countries during the past 2 years.

I will **interview the users at the parking lot**, to find out what we can do better and how we can deliver the most useful and reliable service for them.

Of course I will also test the taxi service, I will **test the parking process myself** and I will take note and record many videos which I will release on Instagram & YouTube.

As soon as **Dash Retail** has their product ready I would like to promote this to the merchants in Caracas which I already got connected with Anypay. I am also involved in testing the product of Dash Retail even before it goes to the merchants. I have already tested it a little bit and delivered some feedback to Ash.

I will continue to make **test purchases using DASH** in Caracas with **Cryptobuyer, XPAY & Anypay** as I have already done before. The results can be observed on this Instagram channel: <http://instagram.com/bitcoinmap.cash> and on this YouTube channel: <https://www.youtube.com/channel/UC62UlfGcASwOTRgkYdz4YIQ/videos> (I have a total of 2000+ followers on Instagram, Twitter, YouTube, Facebook & Memo.)

I will continue to report issues to **Dash Help** on Instagram and measure their responsiveness, I will make calls to their hotlines and make note about the service. I will also get friends to make calls to Dash Help and ask them some newbie questions, to find out if the answers given are sufficient. I can also offer to record test calls and release these calls on YouTube or any other platform that would be desired.

I will continue to check if the merchants listed on **Discover Dash** for Venezuela are really accepting DASH and I will visit them to make test purchases. I will report these results to Discover Dash so that they can update their information and I will also publish these reports publicly and transparently on the Dash Forums so that the MNOs but also the whole community can get a better picture. In the end it should not only be my job to do this quality assurance, as the quality should already be assured by the specific proposal owner.

I will continue to test **DashText, Cointigo** or any other DASH wallet as I already did in this report and I will make sure that I will not make myself vulnerable again by working directly with the PO: <https://www.dash.org/forum/threads/dash-text-quality-assurance.48960/>

I will also test any current and upcoming Android wallet or product that is released by **Dash Core Group**.

In general I will test whatever is demanded by the MNOs, I will be in direct contact with the MNOs, I will receive their orders and do the job necessary.
