PROPOSAL:

I would like to organize a DASH meetup in Barcelona in October to introduce DASH to the community, and before we have the meetup I will introduce DASH to all the merchants which appear on our http://map.therealbitcoin.club (Android App: http://therealbitcoin.club/moveyourbch).

The Android App is much more beautiful and has many more features, the web version was done very quickly with little effort. Most people in the neighborhood Vila de Gracia are using Android so as I am an Android expert since 2009 I programmed that app.

I also believe strongly in open source, that is why IPhone is not my favorite choice and it is not even possible for me to take part as I do not own any Apple hardware.

BACKGROUND STORY:

I would like to promote DASH as the real Bitcoin in the Barrio Bitcoin which TRBC (The Real Bitcoin Club) created during the past months.

At the beginning of January 2018 I decided to work full time for Bitcoin and I did not know any details about DASH, because I lost 10 DASH when I was scammed on dash-wallet.com a few years ago and since then I never investigated any more as I was so disappointed.

So I started that club in Barcelona with an old friend of mine from Germany and informed people about our plans/dreams on the opening event which was held with 40 attendants on 03.03.18 in Barcelona, you can see a video of that here (SPANISH AUDIO/ENGLISH SLIDES): https://youtu.be/dcYyjiZSOCc

The most recent presentation from 30.06.18 you can see here (SPANISH AUDIO/ENGLISH SLIDES): http://therealbitcoin.club/barriobitcoin and the slides can be found here: http://therealbitcoin.club/all-your-base-are-belong-to-bitcoin

I also wrote a document under the pseudonym Satoshi Nakamoto which you can read here: http://therealbitcoin.club/satohiskodex

STAKEHOLDERS:

In the long run the whole DASH community will benefit from my work but especially the community in Barcelona and even more especially the community in Vila de Gracia, which is an especially anarquistic neighborhood.

We want to create a very strong real economy in Vila de Gracia and once we have achieved that 20% of all businesses in that area accept DASH we will expand to other parts of Barcelona.

This proposal which will only return 15 DASH is enough to get something going in Vila de Gracia and produce some results.

Then with the results and with 5 of the 15 DASH we want to make another Masternode proposal to expand.

PROJECT SCOPE

We want to on board more shops to accept DASH and put them in the http://map.therealbitcoin.club

At the same time we will donate DASH to strangers on the street.

We want to expand the user base of DASH and educate people on the reasons why they should be using DASH.

OBJECTIVES

We will convince all the shops which currently already accept BCH payments in Barrio Bitcoin to accept DASH too.

These are about 30-40 shops now, including Restaurants, Bars, Fashion and Hotels.

We will convince them to put a DASH sticker visible in their shop and we will provide pictures of that. Not all of them will directly agree to putting the sticker on the door, but half of them. As soon as the merchants have sales in DASH they will agree to put the sticker.

We only focus on the needs for the consumers, we do not on board any b2b services and we do not on board any service which are not needed in every day life.

At the end of this project we will have all the businesses accepting DASH which are on the http://map.therealbitcoin.club

DELIVERABLES

The high level product is the Android App:
http://therealbitcoin.club/moveyourbch

I will add social features with Facebook/Google/Twitter login so that people can engage with each other and boost usability and interest.

We will rebrand that app and we will call it bitcoinmap.world:
http://bitcoinmap.world (I own that domain)

We will remove any hint to BCH inside the app, and in the description we will explain that at these shops they can spend DASH, BCH and BTC while mentioning DASH first!

SUCCESSS

You will see that the app will be rebranded from moveyourbch to bitcoinmap.world

You will see many pictures on Instagram with shops having stickers.

You will see many pictures on Instagram with people posing happily after I donated them some DASH.

You will see an updated website http://therealbitcoin.club promoting DASH as the real bitcoin and BCH will be promoted as the geek coin.

DASH will be promoted as the coin for the people while BCH will be promoted as an useful alternative to BTC.

You will see that the content of the website will change and the history of DASH will be put above the history of BCH.

People scrolling the website will see DASH first and then they will see BCH.

RISK

There are no external dependencies and I have done the same with BCH very successfully. All the skills needed for that project are delivered by myself. I can do programming, design, marketing, management, communication, I am very diverse in my skills.

The biggest risk I see is that people do not trust me, because they might think I am promoting BCH as the real bitcoin. So the biggest risk is not getting funded.

But to counter that fear, I will update the website of TRBC the moment this proposal is being considered and upvoted by the DASH community. So I will see how many people upvote this proposal in the first week and then when I see that the proposal will probably get funded, I will put DASH on the main page of the TRBC homepage. I will still keep the information about BCH but I will add information about DASH and I will link to all the DASH websites. I will add as much information about DASH as there is available about BCH.

I really want to promote BCH and DASH, I might get funded by BTC.com or Coingeek to promote BCH which would be a different event. I am totally into freedom and I want the best for the people, I think it is an enormous advantage if people know about both coins and can make an educated choice or use both coins at the same time in different areas of the world, as we will have still many years to go until the whole world is covered with bitcoin merchants.

The Real Bitcoin Club is for the people, I do not follow any dogma and I believe it has the greatest value to the whole bitcoin community if I keep informing people on both coins.

BTC has totally failed as P2P money and will never be considered the real bitcoin, I do not promote that, but still as people download the bitcoin.com wallet they can receive BTC and BCH so I give people a choice because I believe strongly in freedom of choice.

In the end people will choose the coin that gives them the most benefits and I think that DASH has a major advantage to BCH because DASH actually cares about the community.

The approach of DASH is so much more complete and I am totally surprised by how many tools and platforms you guys have already created to boost adoption.

On any event which is sponsored by the DASH community I would not talk at all about BCH. The same accounts for the events which might be sponsored by BTC.com or Coingeek where I will only talk about BCH.

I think in the end people will come to their own conclusion that DASH is much better for them as they get donated $10 on the meetups and can spend them right away in the shops in the neighborhood. While BCH has major problems investing in the commmunity as they have so many parties involved which do not agree on the roadmap and they do not have the DAO.

WHO AM I:

I am a very passionate being, I am very dedicated to create more freedom and therefore peace in this world. I was raised in Germany by two teachers. My father was a Linux pioneer who died in 2009 by cancer, since then I investigated a lot about what is really going on in this world and in 2013 after Edward Snowden revealed the NSA spy program I quit my job and started investing my time into my health.

It was also in the year 2013 that I bought my first 10 bitcoins for a value of $130 and I was immediately hooked by the philosophy behind it. I told all my friends they should buy bitcoins right away and one of my friends listened who later funded TRBC with me.

I got in touch with programming since I was 8 years old and wrote my first BASIC program to secure my computer from my brother. Later then I would study HTML and C++ in my free time before I would go to a programmers school in 2006. In 2007 I finished the school and started studying business informatics while at the same time I started working full time as a java professional in a company as an employee.

I had already certified myself twice as a Sun Certified Developer 5.0 and as a Sun Certified Web Developer during my time in the programmers school, because I was bored on the way to the school which took me one hour every day in the train. Later in 2011 I certified a third time as an Oracle Enterprise Java Beans Developer.

Because of my strong dedication, I was able to earn a lot of praise by the employees working with me, which told me that I should go and work as a freelancer, because the company was only paying me 20€ per hour but I could earn 65€ as a freelancer. So after completing the first project in schedule, I went to my boss and asked him to raise my salary from 36.000€ to 48.000€, as my older colleagues were earning as much as 56.000€, but I was working much more efficient than them and my value attributed to the company was much higher than what I was being paid.

They declined my offer so I quit my job and started promoting myself as a freelancer. Without any single day of unemployment I was permanently employed as a freelancer and I got my first job in Berlin for a salary of 65€. I was tired to travel each week from Cologne to Berlin after 3 months (as I was still studying business informatics and wanted to finish the degree) and therefore I started working from Cologne remotely for the same company. But working at home was very boring to me, as I am a social person and I need people around me while I am working.

So I got another offer from a company close to my home and I was working there until I finished my diploma in April 2009. After I finished my diploma I wanted to become a project manager, but the company I was working for was small and didn't see the opportunity I was offering as they had a project manager already. They basically wanted me to keep programming because I was so efficient in that job, but I was bored because even when programming they would tell me how I would have to program.

Therefore I decided to become an entrepreneur and I ordered the first Google mobile the G1 from the United States. I registered as an Android Developer, I ordered the phone, I rented an office with a good friend of mine who was a successful poker player back then (The same friend who started TRBC with me in 2018). As I was also a hobby poker player back then and I had studied lots of mathematics about poker reading books on my way to work I gave Pot Limit Omaha a try and started myself to play online poker.

After one month of playing online poker I had earned $3000 already and I decided to give it another month. After the second month I had earned $10000 so I decided to go full time on online poker and me and my friend moved to Malta which is an island south of Italy where the laws allowed us to play online poker, which was illegal/grey-zone in Germany.

In Malta I made friends very fast, thanks to Facebook and the strong German poker player community there. I made friends with a guy who had won $1.000.000 already and he started sponsoring/staking me to play the highest stakes in online poker. As he saw that I had put in a lot of effort to understand the mathematics behind poker and I had access to some unique information as I had also programmed a tool to calculate certain probabilities which would help my strategy which gave me an advantage.

After playing these "nosebleed" stakes for 2 months I had made so much money I could barely imagine and when I had a downswing I decided that this money is too much for me to put at risk and I stopped playing and moved back to Germany as my father was dieng from cancer and I wanted to spend some time with him.

To finish my career as a poker player I went to the World Series of Poker in Las Vegas in 2010, I was staked by some friends to play 5 major events and I cashed in on one major event. I was also card counting on the blackjack tables but after two days the management of the casino shut me out of the game and made me sign an agreement to never return to any "Harrahs" casinos.

Then I had a very relaxed time from 2010 to 2011 travelling to Thailand before I decided to work as a Java freelancer again. As poker is such a stressful job and it is really hard to overcome the psychological challenges if you are a young guy. And at the same time online poker was very boring and you had to play at night to get the best action. Offline poker was also boring as you could not earn nearly as much and had to listen to all the people whining at the table.

So in 2011 I finally started programming my first Android Apps and I had en extremely successful app in the Play Store after 6 months. I developed an audio P2P content sharing platform which I branded in 4 different ways (Jokester, Singster, Rapster and Fuckster). Google didn't like my Fuckster app, because it was a content sharing and rating platform for audio porn. This app was so successful that I was number 1 with the top 3 keywords: Sex, Fuck, Porn and I had a revenue stream of $400 each day just by ads. The app had 1 million downloads in the first month before Google removed it from the Play Store and they also removed me as an Android Developer and forbid me to ever again publish apps there.

Despite the fact that Google had kicked me out the advertising company called MobClix would not pay me out my earning, which made me completely frustrated and which also helped me to understand why we need crypto so much, as in the future ad companies can payout people with crypto and much more frequently.

As I was still quite naive I was very depressed because I thought that all I was studying for was to develop Android Apps, but now Google would not allow me to follow my passion.

After a few weeks I realized that Google can not shut me out of the Play Store, because I simply opened an account on the name of my wife in 2012. I programmed a MVP of an Open Face Chinese Poker client server app and then I went to my friends and asked them to join the project. We managed to work together, on board a designer, everyone working for free, for a few months, in a team of 3 programmers, before they decided they had to earn money again. So the project broke away and I was not skilled enough in IPhone development and didn't own any Apple hardware which led me to the conclusion that I can not finish and maintain that project alone. I was also tired of software development in general, as I had been programming 12 hours every day for a full year. While my dogs would not see much of the outside world during day-time as I was mostly working at night to be able to focus better on being totally obsessed by that project.

After investigating a lot on YouTube in mid 2013 after Edward Snowden published the NSA leaks, I stopped drinking alcohol, I stopped smoking cigarettes and I started eating organic raw vegan food.

At the end of 2013 I canceled the poker app project and started working on another enterprise with my wife. We successfully opened a cosmetics studio and from then on I was managing the studio and taking care of the dogs and practicing lots of Yoga. That was the same time we realized that we should not pay rent anymore to get more freedom and we moved to live in our van.

In 2015 I left Germany and divorced from my wife to live in another country, as Germany is really a hopeless occupied territory by the U.S. army (42.000 U.S. soldiers permanently in Germany) and we also have 13.000 British soldiers still in Germany. I learned a lot about international politics and I was clear that I had to live in another country where I could grow my own food.

When I arrived in Barcelona in August 2015 I started learning Spanish with DuoLingo and I was investing a lot of time into my personal development. I traveled a lot with my van in 2017 visiting many psy-trance festivals and just getting to know life. Which in the end gave me the energy to start The Real Bitcoin Club at the beginning of 2018.

I hope you appreciate the details to get a more clear picture of who I am and to realize that I am very dedicated in everything I do, the only issue I have is that I can not work under anyone telling me what I have to do, because usually I see things they do not realize and it makes me crazy not being able to really unfold my potential.

With the DASH proposal system it might be possible for me to unfold my potential, all I need is a chance to demonstrate you how capable I am. I think I also demonstrated by creating the first Bitcoin neighborhood worldwide and by my dedication that I am exclusively living on BCH since April. I have not spent any fake money since April and I do only consume in shops where I can spend BCH, that is part of my strategy as because of that I have a strong motivation to convince more merchants to accept bitcoin.

Now I would like to do the same with DASH and if you prove me that you accept me as a member I might go full-time DASH and even trade all my BCH for DASH (at the moment I am already holding more DASH than BCH since I traded a share of my crypto for DASH a week ago), but first

I have to see that my dream can really become true with DASH and that it is not just another illusion like the one I had with Roger Ver and the Bitcoin Cash Fund.

I tried to get sponsored by Roger Ver and The Bitcoin Cash Fund but they did not fund me as bitcoin.com wanted to hire me as a developer which I declined as I can not work for anyone who tells me what I have to do. After that I declined their offer to work for them they even blocked me in the comment section of bitcoin.com, I am also banned on r/btc after I made a post about DASH, right now I am trying to get some funds from Coingeek and BTC.com

The value I have to offer to the whole bitcoin community is incredible as my cost of living is so low (I spend just 300€ a month on food and I do not have to pay any rent) I truly believe that I can lead DASH to success in all of Spain and we can write history together, all I need is a chance to prove my skills and show you some results.

The main problem I had throughout my whole life is that the people who have the money do not realize that they have to leave me alone and let my creativity flow, I consider myself as an artist, I consider software development as an art and if the developer gets mixed with other interests things do not end optimally. I communicate a lot and I always consider the opinions of everyone into my decisions but I have to be the one to make the ultimate decision when it comes to the program I am developing, because I have a different consciousness most people can not imagine. I consider myself a genius as I never obeyed to the system, I was always having trouble in school because the teachers wanted to make me obey, only later when I was going to the programmers school where I wanted to go, I had mostly A (1) grades without studying at all and I finished the school as one of the two best students.

Please give me a chance and I promise you will be amazed!
