

Setting Up DASH for your Business

1. First, you need to **install a DASH wallet.**

a) For home computer: www.dash.org/wallet/how-to-install-the-wallet/

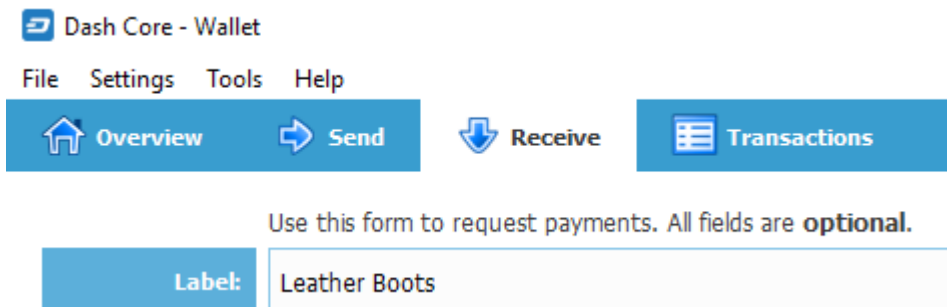

b) When you've synced with the network & encrypted your wallet, next step.

2. Now, let's **create a QR code** for your merchandise. This will allow your customers (online and in person) to scan the code and instantly send you money.

a) In your DASH wallet, click on "receive"

b) Your label tells you what product your customer bought. Let's make one called "Leather Boots".

3) Let's **sell our Leather Boots for \$20.** How do we know how many Dash that is? Open a web browser and go to: <http://coingain.com/price/dash/cad>. Click the "swap" button to convert Canadian dollars to Dash. Type in \$20, and press update.

Canadian Dollar (CAD) 3.12 Dash (DASH)

4) We now know that \$20 CAD equals 3.12 Dash. We **enter that amount into the Dash Wallet.**

Label:

Amount:

Message:

5) **The “Message” box is optional**, but we can just put, “Thank you for shopping at our store!”

Label:

Amount:

Message:

6. Now **let’s generate our QR code** by pressing “Request Payment”

Message:

☐

7. We have our QR product code! Now we just have to **print the QR code**, and place it on our product! Click on “Save Image...” and save it to your computer.

8. Once printed, you can **place the QR code on your product or stand**, or place the QR code on your website for online products. You can even create your own “donate” or “tips” button this way.

9. Now, your customers can use their Dash wallet App, and simply scan your products and pay for them anonymously and instantly in-person, or from anywhere in the world!
